Procurement Objectives

- Develop a full partnership relationship with an Industry Partner that will result in cost-effective delivery and maintenance of high quality applications for ESE customers.
- Become the Agency's and partners' vehicle of choice for major environmental, administrative and research related application systems development.
- Increase the flexibility in the application of CMM requirements across Systems Development Center (SDC) applications.
- Reduce the time required to deliver new applications and strengthen service delivery through implementation of industry best practices.

Procurement Objectives

(continued)

- 
- Obtain an integrated solution for EPA that leverages the strengths of the Industry Partner with the capability of specialized best of breed companies.
 - Maximize inter partner, agency, and system development project synergy regarding standards, architecture, and systems interfaces.
 - Create a partnership between NTSD, an industry partner, Agency major contractors, Agency infrastructure initiatives, and Program Offices and partners to achieve Agency and partner goals and objectives.
 - Maintain the ability to support audits by EPA and Federal oversight groups, such as the EPA Inspector General and the General Accounting Office.
